

UGE 300 N

2 UGE 300 N

The UGE 300 N Underfloor Wheel Lathe is CNC double-saddle special-purpose lathe designed to machine wheelsets of heavy rail vehicles (locomotives), with or without dismantling them from the vehicle. The machine tool is also available in the tandem configuration – 2 UGE 300 N – capable of machining two wheelsets of the same bogie at the same time.

Roll-Through / Underfloor Wheel Lathes

- Installed in a pit-type foundation (below the traffic rails) and operating in roll-through system
- Reconditioning of wheel profiles and brake discs mounted on vehicles significantly shortens the shutdown time of the rolling stock and thus increases efficiency of its exploitation
- Unique system of wheelset lifting and driving realized by four independent drives ensures flexible pressure of rollers and constant contact between driving rollers and wheels
- Automatic and reliable profile wear measurement using touch-type or laser-based system
- Versatile equipment and wide programming options guarantee precise machining of even unusual wheel profiles

Available Machining Operations

Wheels

Brake discs

TECHNICAL SPECIFICATIONS		UGE 300 N	2 UGE 300 N Tandem
Wheelset geometry			
Version		D-3	D-3T
Track gauge	mm	1435 ⁽¹⁾	
Max. wheel tread diameter (before machining)	mm	1500	
Min. wheel tread diameter (after machining)	mm	600 ⁽²⁾	
Max. width of wheel rim	mm	150	
Max. axle load	×10 kN	30 / 40	30 / 40
Machine tool parameters			
Min. wheel base	mm	-	1800
Max. chip cross-section (for each saddle)	mm ²	10 ⁽³⁾	10 ⁽³⁾
Continuously variable cutting speed of main drive for wheel profile machining	m / min	20 to 80	20 to 80
Max. peripheral speed of drive rollers:			
• Profile machining	m / min	130	130
• Brake discs facing	m / min	300	300
Number of main drive motors	pcs	4	2 × 4
Power of each main drive motor	kW	15	15
Total power installed (standard execution)	kW	100	200
Machine tool overall dimensions and weight			
Machine tool overall dimensions: :			
• Length	mm	2000	3600 ⁽⁵⁾
• Width	mm	5150 ⁽⁴⁾	
• Height	mm	1900	
Approximate weight of machine tool	×10 kN	24	50 ^{(4) (5)}
Machine tool accuracies			
Difference in diameters between two wheels of the same wheelset	mm	≤ 0.15 ⁽⁶⁾	
Difference in diameters of four wheels in the same wheelset	mm	≤ 0.30 ⁽⁶⁾	
Radial run-out of wheel tread	mm	≤ 0.10 ⁽⁶⁾	
Axial run-out of wheel inner faces	mm	≤ 0.10 ⁽⁶⁾	
Accuracy of profile machining	mm	≤ 0.15 ^{(6) (7)}	
Roughness of wheel profile surface after machining, Ra	µm	≤ 12	
Roughness of brake disc surface after machining, Ra	µm	≤ 4.5	
⁽¹⁾ – Another track gauge to be agreed upon. ⁽²⁾ – 540 mm – with additional drive rollers. ⁽³⁾ – At axle load ≥ 240 kN and wheelset holding down; Wheel material – Steel: Hardness ≤ 210 HB, Tensile strength ≤ 850 N/mm ² . ⁽⁴⁾ – For track gauge of 1435 mm and standard execution. ⁽⁵⁾ – For wheel base 1800 mm. ⁽⁶⁾ – The tolerances concern the following conditions: machining process of steel solid wheels in two cutting passes and with intermediate measurement of wheel tread diameter; The cutting tools in good condition; the wheelsets equipped with outboard axle boxes of bearing slackness within tolerances by manufacturer. ⁽⁷⁾ – Measured with machine tool measuring system or clearance between profile gauge and wheel profile surface.
